

NIGHT SKIES

By Fiber Optic Group

The Fiber Optic Group creates superior fiberoptic nightscapes for projects around the world. The Artistry of placing and combining each star within a ceiling is a skill mastered from over 25 years of working with fiber optic lighting.

We have designed fiber optic night skies for many residential and commercial applications including:

- POOL DECKS
- GAME ROOMS
- GREAT ROOMS
- OVER BATHTUBS
- THEATER ROOMS
- SWIMMING POOLS
- WATER FEATURES
- CHILDRENS BEDROOMS

The Fiber Optic Group's commitment to creating one of a kind nightscapes assures our clients continuous access to our artistic design, engineering, craftsmanship and installation services.

We consider each project an individual work of art, not another day of construction. We do not utilize patterns for our random nightscapes. When reproducing astronomically correct galaxies, the points of light are placed with accuracies measured in the .001' s of an inch.

The Fiber Optic Group can also provide fiber optic materials for star ceilings in standard or custom kit form. We assemble star bundles in lengths up to 100' . We can include shooting stars, comets or meteors into any nightscape.

Our extraordinary customer service is not limited to excellent communication. We work closely with contractors, lighting designers, architects and sub-contractors to achieve the desired result. The Fiber Optic Group offers you a truly exceptional experience.
